

axigen MAIL SERVER

Carrier class **technology**. Outstanding **support**.

Service Provider Edition

A carrier class messaging solution with excellent technical support, AXIGEN Service Provider Edition provides speed, security and reliability. Its failsafe, intelligent storage system helps you avoid any interruption of service or loss of data. It offers smooth, automatic migration from any third party mail server and helps you build better and more appealing solutions for your customer base, at highly competitive prices.

Main features & benefits

Clustering support - for large scale solutions:

Multi-tier setup (front-end & back-end servers)	✓
High availability (RHCS integration)	✓
LDAP authentication & routing	✓
Delegated Administration	✓
Multiple administrative users	
Groups for simplified permissions management	
Domain level permissions	

Administration & reporting

Account Classes - dynamic configuration inheritance	✓
Automated operations (Command Line Interface)	✓
Security policies; AntiVirus & AntiSpam support	✓
Routing policies	✓
Queue management (filtering & actions; virtual queues; retry policies)	✓
Advanced Reporting Engine (traffic statistics; storage reports; charts)	✓

Additional tools & utilities

Backup & Restore	✓
Automatic migration tools	✓
WebMail interface customization, external filtering APIs	✓

Personal Organizer (calendar, journal, notes, tasks)

add-on

SECURED BY AXIGEN GrowSecure™ ARCHITECTURE

- Multiple AntiVirus and AntiSpam support
- Server, domain and user level filters
- Sender validation (SPF), message integrity validation (DomainKeys compliant)
- Encryption & Authentication policies
- Access Control, Whitelisting / Blacklisting, Open Relay blocking

PROFESSIONAL AXIGEN UltraStorage™ TECHNOLOGY

- Effective space management** - only one copy of a message received by multiple recipients is stored (particularly useful for distribution lists and groups)
- Transactional storage** - provides structural integrity for the stored information
- Storage overload prevention** - limit allowed message sizes according to policies based on specific message / connection parameters
- Indexed data structure** - ensures an optimal balance between the space used for storing indexes and the time to access information
- Error detection and recovery** - the storage module identifies and isolates areas with corrupted information in order to prevent subsequent data loss

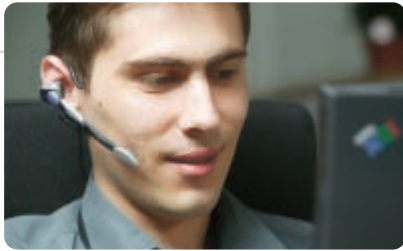

SEAMLESS EMAIL FLOW WITH AXIGEN SmartProcessing™

- Queue management** - inspect the messages in the queue using different filters (e.g. sender, message size, retry count); take various actions on the matching messages (e.g. delete, reschedule, send NDR)
- Virtual queues** for distinct remote domains - protect the server from potential overload generated by multiple simultaneous email sending attempts to an unresponsive domain
- Processing thread control** - balance the processing power by allocating a specific maximum number of parallel threads to each service, according to your needs
- Virtual routing** - control the routing of specific messages through chosen outbound IP addresses based on various message parameters
- Built-in DNS cache** - accelerates message delivery by caching DNS responses for use on multiple messages

A Carrier-class Mail Server for Service Providers

Designed for speed, security and reliability, Axigen is a powerful messaging solution dedicated to Internet and Hosting Service Providers.
